

Ex. No. 2	CREATING AND DROPPING TABLES WITH VARIOUS CONSTRAINTS
Date: 19-01-2026	

Aim:

To create and drop collection with various constraints.

Procedure:

CREATE

1. Creating a database using the Use <db> command: syntax :

use <databaseName>

Query: use vehicletracker

Output:

>switch to vehicleTracker

If vehicleTracker does not exist, MongoDB will create it when data is inserted.

2. Creating a collection using the db.createCollection("<collectionName>") command :

The db.createCollection("<collectionName>") command in MongoDB creates a new collection with the specified name in the current database.

syntax : db.createCollection("<collectionName>")

Query: db.createCollection("vehicles")

Output:

>{ ok :1}

.DROP

Dropping a collection using db.<collectionName>.drop() the command:

The db.<collectionName>.drop() command in MongoDB permanently

deletes the specified collection and all its documents from the database

syntax : `db.<collectionName>.drop()`

Query: `db.vehicles.drop()`

Output

< true

Dropping a database using the db.dropDatabase() command:

The db.dropDatabase() command is used to permanently delete the selected database along with all its collections and documents.

Before executing, ensure you have switched to the correct database using the use database_name command.

syntax : `db.dropDatabase()` **Query:**

> use vehicleTracker

> db.dropDatabase()

Output:

> switched to db vehicleTracker

> { ok : 1, dropped : 'vehicleTracker' }

Result:

Thus the creating and dropping database and collection on MongoDB compass was execute successfully.
